Education & Background

Max Planck Institute for Radio Astronomy (MPIfR) — **Aug. 2018 – Now**
Postdoctoral researcher — *Bonn, Germany*

National Astronomical Observatories (NAOC), CAS — **Sep. 2014 – Aug. 2018**
Ph.D. student of Astrophysics — *Beijing, China*

University of Hertfordshire — **Feb. 2016 – Oct. 2017**
SKA Joint Ph.D. student of Astrophysics — *Hatfield, UK*

Xinjiang Astronomical Observatories (XAOC), CAS & NAOC — **Sep. 2011 – Jul. 2014**
Joint Master student of Astrophysics — *Xinjiang & Beijing, China*

Xinjiang University (XJU) — **Sep. 2007 – Jul. 2011**
Student of Physics — *Xinjiang, China*

Research Interests

- The birth of HII regions: HCHII and UCHII regions
- Multi-band continuum study (from radio to near infrared) of ISM related to star formation
- Multi-band (from radio to submm) RRLs study
- Young PNe associated with OH and water masers
- Line study to investigate the outflow properties of high-mass star formation
- Observations of radio interferometer and single-dish telescopes

Research Experience & Projects

Enrolled in the VLA survey: GLOSTAR | *Postdoc, Prof. Dr. K. M. Menten* **2018-Now**

- The GLOSTAR survey ($2° < \ell < 60°, -1° < b < 1°$) observes lines (formaldehyde, methanol maser, and radio recombination lines) and continuum, using VLA B- and D-configuration and the Effelsberg at C-band.
- Calibrate the B-configuration continuum data ($2° < \ell < 28°, 36° < \ell < 40°$) of the GLOSTAR survey, using Obit.
- Work on the source extraction, classification, and catalog construction of the GLOSTAR survey. In Prep.
- Work on the follow-up observations of HII regions and PNe of the GLOSTAR survey. Data approved.

Hyper-compact HII regions | *Ph.D., Prof. Dr. Mark Thompson* **2016-Now**

- To understand the nature of Hyper-compact HII (HCHII) regions and its rarity, we search for HCHII regions.
- To get HCHII region candidates, we first obtain 534 positive spectral radio objects ($S \propto \nu^{+\alpha}; \alpha > 0$), by measuring their spectral index between 1-5 GHz from VLA Surveys of THOR, CORNISH, and MAGPIS.
- To identify HCHII region candiates from the 534 positive spectral radio objects, we analyse their multi-band emission properties, based on data from surveys of FIR (Hi-GAL), MIR (GLIMPSE), NIR (UKIDSS), submm (ATLASGAL).
- To study the HCHII region candidates, we observed them at VLA X-band (8-12 GHz) and K-band (18-26 GHz).
- To measure the physical properties of the HCHII region candidates, we reduced the VLA data and build their radio SED between 1-26 GHz. See Paper I ; Paper II

Molecular Outflows of massive clumps | *Ph.D., Prof. Dr. Mark Thompson, Dr. James Urquhart* **2017-Now**

- To identify outflows, we used the ATLASGAL clumps and the CHIMPS data, based on the Python script.
- To systematically discuss when outflow activity switches on, how it evolves in the massive clumps, we map the outflow lobes of these outflow clumps and measure their outflow properties. See Paper I
- To find more outflows, we used CO data from the SEDIGISM and CHIMPS2 survey, and Paper II under review.

Kinematic distance of Galactic Planetary Nebulae (PNe) | *Ph.D., Prof. Dr. Wenwu Tian,* **2014-2016**

- To estimate the kinematic distances of radio PNe, we analysed the velocity of emission/absorption features of HI and CO for the 18 PNe, based on the axisymmetric rotation curve model for the Galaxy and the script written by C.
- To obtain the spectra of HI and CO for 18 PNe, we used the software KVIS and archival data. See The Paper

Pulsar nulling phenomena | *Master, Prof. Dr. Jinlin Han* **2011-2014**

- To understand pulsar nulling phenomenon, we proposed a new method and applied it to 10 nulling pulsars from a total sample of ∼185 summarised from literature. See The Paper

Other PI projects | *MPIfR* **In progress**

- Multi-band surveys of radio recombination lines (RRL) for a sample of 114 young regions, with PI data observed by the APEX, IRAM 30m, and Effelsberg.
- Study the interaction between outflows and broad RRL of HCHII regions, with data supported by ALMA, VLA, APEX, IRAM and Effelsberg.
- Study the maser-emitting planetary nebulae, with PI data observed by VLA and Effelsberg.

Publications

As of Nov. 2021: **7 first-author papers:** 6 published and 1 under review;
15 co-authored papers: 10 published and 5 under review;
22 papers in total, 187 citations, h-index = 6. See the ADS Public Library

Proposals — Total: 1108.8 h

Approved: 1011.7h | New Submitted: 97.1 h | PI: 360.5 h | Co-I: 748.3 h

- ### PI proposals

13. PI: **Aiyuan Yang, approved**, CoI: Friderich Wyrowski, Karl Menten et al., VLA ID: VLA/21B-131, 2021, B-configuration., 2 h;
12. PI: **Aiyuan Yang, approved**, Effelsberg project ID: 19-21, 2021, 20.6 h;
11. PI: **Aiyuan Yang, submitted**, Effelsberg ID: 101-21, 2021, 62 h;
10. PI: **Aiyuan Yang, submitted**, CoI: Friderich Wyrowski, Karl Menten et al., VLA project ID: VLA/22A-294, Feb. 2021, D-configuration., 4.4 h;
9. PI: **Aiyuan Yang, submitted**, CoI: James Urquhart, VLA ID: VLA/22A-297, Aug. 2021, D-configuration. 12 h;
8. PI: **Aiyuan Yang, observed**, CoI: Friderich Wyrowski, Karl Menten, et al., Effelsberg ID: 77-19, , 2019, 88 h;
7. PI: **Aiyuan Yang, observed**, CoI: Friderich Wyrowski, Karl Menten et al., IRAM ID: 043-19, 2019, 33 h;
6. PI: **Aiyuan Yang**, CoI: Thompson M. A., W. W. Tian, VLA project ID: VLA18B-065, Feb. 2018, A-config, observed 9 h;
5. PI: **Aiyuan Yang, observed**, CoI: Thompson M. A., W. W. Tian, VLA ID: VLA/19B-040, Feb. 2018, A-config, 13 h;
4. PI: **Aiyuan Yang**, CoI: Thompson M. A., W. W. Tian, VLA ID: VLA/19B-041, Feb. 2018, C-config, observed 4.5 h;
3. PI: **Aiyuan Yang, observed**, CoI: Friderich Wyrowski, Karl Menten et al., APEX project ID: 9516A-2019, 2019, 100 h;
2. PI: **Aiyuan Yang, observed**, CoI: Thompson M. A., W. W. Tian,VLA ID: VLA18A-066, Aug. 2017, C-configuration., 13.5 h;
1. PI: **Aiyuan Yang, observed**, CoI: Thompson M. A., W. W. Tian, VLA ID: VLA17A-070, C-config, Aug. 2016, 3 h;

- ### Co-I proposals

5. CoI: **Aiyuan Yang, approved**, PI: Wenjin Yang, Karl Menten et al., Effelsberg ID: 17-21,2021, , 37.6 h;
4. CoI: **Aiyuan Yang**, PI: Karl Menten, Effelsberg ID: 102-20, 2021, approved 600 h;
3. CoI: **Aiyuan Yang, approved**, PI: M. Rugel Karl Menten et al., Effelsberg ID: 13-20, 2021, 30 h;
2. CoI: **Aiyuan Yang, submitted**, PI: Rohit Dokara, Karl Menten et al., VLA ID: VLA/22A-172, Aug. 2021, D-configuration, Aug. 2021, 8.7 h;
1. CoI: **Aiyuan Yang, submitted**, PI: Andreas Brunthaler, Karl Menten et al., VLBA ID: VLBA/22A-390, Aug. 2021, 72 h;

Language and Skills

- **Computer Language**: python, C, R, and HTML
- **Language**: English (fluent), Deutsch (beginner); Chinese (first language)
- **software**: CASA, Obit, KVIS, TOPCAT, DS9, AEGEAN, BLOBCAT, Latex, and GILDAS

Honors and Awards

- CAS Presidential Scholarship (2018).
- China Scholarship Council Scholarship, SKA project, China-UK (2016-2017)
- National Scholarship of China (2015-2016)
- National Scholarship of China (2015-2016)
- Advanced Micro Devices (AMD) Scholarship at NAOC (2015-2016)
- Outstanding student at NAOC (2014-2016)
- Outstanding student leader of College of Physics Science and Technology at XJU (2009)
- Government grants for outstanding students (2007-2011)

Presentations

- Workshop talk, The SEDIGISM workshop, Bonn, Germany, Sep. 2021, "*Molecular outflows in the SEDIGISM survey*"
- Talk at the MPIfR, Bonn, Germany, March. 2020, "*Hypercompact HII regions identified from young HII regions*"
- Talk at the MPIfR, Bonn, Germany, Nov. 2018, "*Multi-band study of ISM related to massive star formation*"
- Seminar talk, Chinese radio astronomy annual conference, Hefei, Anhui, China, Nov. 2017, "*Searching for hyper-compact HII regions using JVLA survey data*"
- Seminar talk, the 2th Chinese annual conference of SKA, Shanghai, China, Dec., 2017, "*A search for steep positive radio spectrum object: make predictions for SKA and its precursors*"
